                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the nucleotide sequence of Staphylococcus aureus strain ISP3

(ATCC 202108) genomic DNA including the novel cbrA gene that codes for a 310-amino acid protein (see AAY18124) of predicted mol.wt. 36.8 kDa. The sequence was obtained from overlapping clones BTACA44 and BTAGA54, which span a single operon containing the cbrA, cbrB and cbrC genes (see AAY181899-91). CbrA shows sequence homology to known genes involved in iron regulation. The invention provides 11 novel genes (see AAY1817-27). Also provided are vectors, host cells, antibodies and hybridomas. The invention further relates to screening methods for identifying agonists and antagonists of S. aureus polypeptide activity, and to diagnostic methods for detecting Staphylococcus nucleic acids, polypeptides and antibodies in a biological sample. Antagonists of cbrA may be useful as antibiotics to treat infections of S. aureus and other Staphylococcus spp. Also provided are novel vaccines for the prevention or attenuation of infection by staphylococcus. The isolated nucleic acid molecule is also useful for generating probes and primers, and in the recombinant production of cbrA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4

                                                                                                                                                                                                                                                                                                              The invention describes a new isolated nucleic acid molecule comprising:
a sequence that is 95% identical to a fully defined sequence having 586-
2226 bp, or its complement; or a sequence encoding a polypeptide having a
fully defined sequence comprising 136-691 amino acids, or its complement.
The game is Staphylococcus aureus gene. The nucleic acid is useful for
preparing a vaccine against infection caused by Staphylococcus aureus.
The methods are useful for preventing or attenuating an infection caused
by a Staphylococcus, detecting Staphylococcus nucleic acids in a
biological sample obtained from an animal, and detecting Staphylococcus
antibodies in a biological sample obtained from an animal. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TAGTTCAAGTAACTCAAGTAAAGAGTCATCAAAAGATGGAGTTGAAATCAAGCACGAAGA 146

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of DNA encoding novel Staphylococcus aureus surface-exposed immunogenic polypeptide (SEIP) D2 SA02. To isolate SEIP genes, an expression library of S. aureus genomic DNA was screened with anti-SEIP antiseara. DNA was isolated from clones expressing SEIPs, and amino acid sequences were deduced and analysed for conserved and/or functional domains. The SEIP encoded by the present DNA sequence has sequence homology with the siderophore family of pariplasmic binding proteins. The invention provides methods for the identification, production and recovery of SEIPs. The SEIPs can be used individually, or in combination, to produce anti-staphylococcal antibodies useful in staphylococcal infection. They can also be used to develop diagnostic asseays

SEQ ID #238.

Staphylococcus aureus contig

(first entry)

16-MAR-1999

AAV74549;

BP

AAV74549 standard; DNA; 3775

```
nedium, preferably selected from a floppy or hard disk, random access medium, preferably selected from a floppy or hard disk, random access medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM, Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition adminst S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of sollypeptides can also be used in a kit for the immunodetection of sollypeptides can also be used in a kit for the immunodetection of syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can be used for the computer of any of the S.aureus DNA sequences contained on the computer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      87 TAGTICAAGIAACTCAAGIAAAGAGICAICAAAAAGAIGGAGTIGAAAICAAGCACGAAGA 146

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid, (2) a host cell containing the vector; (3) an isolated concluded antisense nucleic acid; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding cantisense nucleic acid; (4) an antibody capable of specifically binding colliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for colliferation or the activity against a biological pathway required for proliferation, or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological contains an extinity against a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent compound's activity; (11) a culture comprising strains in which the extent compound's activity; (11) a culture comprising strains in which the extent compound's activity; (11) a culture compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for for dentifying proteins or screening for homologous nucleic acids are useful for for dentifying proteins or screening for homologous nucleic acids are useful for dentifying the research manufactor acids are useful for dentifying the research and dentifying acids required for an organism. The antisense manufactor acids are useful for an extense and dentifying acids are useful for an extense and dentifying acids are useful for an acid and acids and acid and acid and acid and acid and acid and acid acid acid acid acid aci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         430
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

A composition comprising the S. aureus protein, a muticleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63

and (II) can have antibacterial activity and therefore can be used in vacination. The mucleic acids (I) and therefore can be used in the vacination. The mucleic acids (I) was be used to produce the S. epidemidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their creatment of S. epidermidis infections, e.g. endocarditis. AAMS3971 to AAMS5090 represent specifically claimed S. epidermidis genomic DNA polymucleotide sequences and primers which are used in the exemplification of the present invention. AAMS5091 to AAMS5090 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polymucleotide sequences given in the capture of the present specification, however the sequence listing only goes up to SEQ ID NO:4445 so even though sequences are given the disclosure for SEQ ID NO:4445 to 472, no sequences are present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2705 GGAGTGGAATCAGTGAGAGGTTTAAAATTTTAAGTGTAATTGGCTTATTGTTTTTA 2764

The invention relates to an isolated nucleic acid comprising any one of the foll antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid; (2) a host cell containing the vector; (3) an isolated concising a polypeptide whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for concision or the farth has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene product or that has an activity against a biological pathway in which a proliferation or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent compound's activity; (11) a culture comprising strains in which the extent compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for culturation of an organism. The antisense nucleic acids are useful for for continuar proliferation to isolate candidate molecic acids are useful. 193 316 137 AGCACGAAGAAGGTACTACGAAAGTACCTAAACACCCTAAACGTGTTGTTGTTCTTGAGT 196 256 194 Accargeaanacecarecreseccandrecereceaecereceneanacegreereres 253 376 254 daakeeleegeekasekaakeeradaadeekireereekereraakeekaakeeraarekirid 313 CTGATAATAATAGACACAAAAGTATTTATAAAGACTTAAAATAAAATTGCTCCTACGATTG 436 AACTGAAAAGTTTCGATGGAGATTATAATGAAAATATTGATGCTTTTAAAACAATTTCAA 496 drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences 134 TCTCGTTCGCCCGATGCGCTGGCCGCCGTGGACGTCAGCCCCGATCGGTATTGCCGACGATA 197 ATTCATTTGTTGATGCGTTAGTTGCTTTAGATGTTAAACCTGTTGGGATAGCGGATGATA 257 ACAAAAAAATCGTATTATTAAACCATTAAGAGATAAAATTGGAAAATACACTTCTGTAG GAACACGTAAGCAACCTAACTTAGAAGAAATCAGTAAACTTAAAACCAGATTTAATTATTG Gaps New antisense nucleic acids, useful for identifying proteins or scre for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. ö Length 900; Sequence 900 BP; 198 A; 266 C; 256 G; 180 T; 0 U; 0 Other; 10.2%; Score 103.2; DB 8; Length 52.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genem of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful care sensitive to P. luminescens encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P.

             from Photorhabdus luminescens which are active against insects. The proteins of the invention are toxic to Lepidoptera, specifically the genera Plutella, Heliothis, Helicoverpa, Spodoptera and Ostrinia. The DNA tanaforts sequences of the invention are useful in the preparation of transgenic, insect-resistant plants, specifically wheat and maize. The present Photorhabdus luminescens genomic DNA contains the coding sequence for the two insecticide proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 436

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and mamnoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and RST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPRC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, cn bw sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre d'Ettude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GSS 26-JUL-1999
